New era in electromagnetic nuclear physics

- Electrons and photons are perfect tools to explore the properties of strongly interacting systems.
- In the past ~ 25 years many facilities with high-quality continuous beam and large acceptance detectors were launched.

Insight into the Strong QCD from the Synergy between Experiment, Phenomenology, and Theory

Experiment

Theory

Observables from the Experiments with the EM Probes:

- Differential cross sections
- Beam asymmetry
- Target asymmetries
- Recoil asymmetries
- Combinations of 2-fold and 3-fold asymmetries

Phenomenology:

- Amplitude analyses
- Reaction models

Elastic/Transition form factors
PDFs, PDA,TMD-functions
Compton form factors
Projection of GPD to observables

Strong QCD underlying the hadron generation

QCD Lagrangian:

$$\mathcal{L}_{QCD} = \bar{\psi}(i \not{D}_a T_a - m)\psi - \frac{1}{4} F_a^{\mu\nu} F_{\mu\nu,a}$$

- Covariant derivative, gluon field tensor

$$D_a^\mu = \partial^\mu + igA_a^\mu$$
$$F_a^{\mu\nu} = \partial^\mu A_a^\nu - \partial^\nu A_a^\mu - g f_{abc} A_b^\mu A_c^\nu$$

- Color matrices and structure constants

$$[T_a^{(F)}, T_b^{(F)}] = i f_{abc} T_c^{(F)}, \quad (T_a^{(A)})_{bc} = -i f_{abc}$$

- Lattice QCD
- Continuum QCD

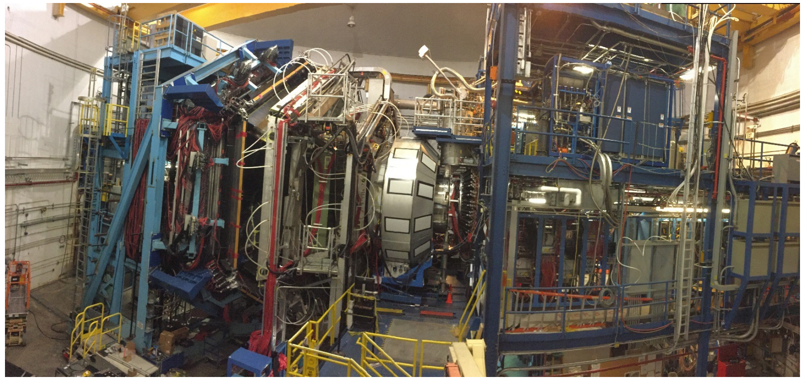
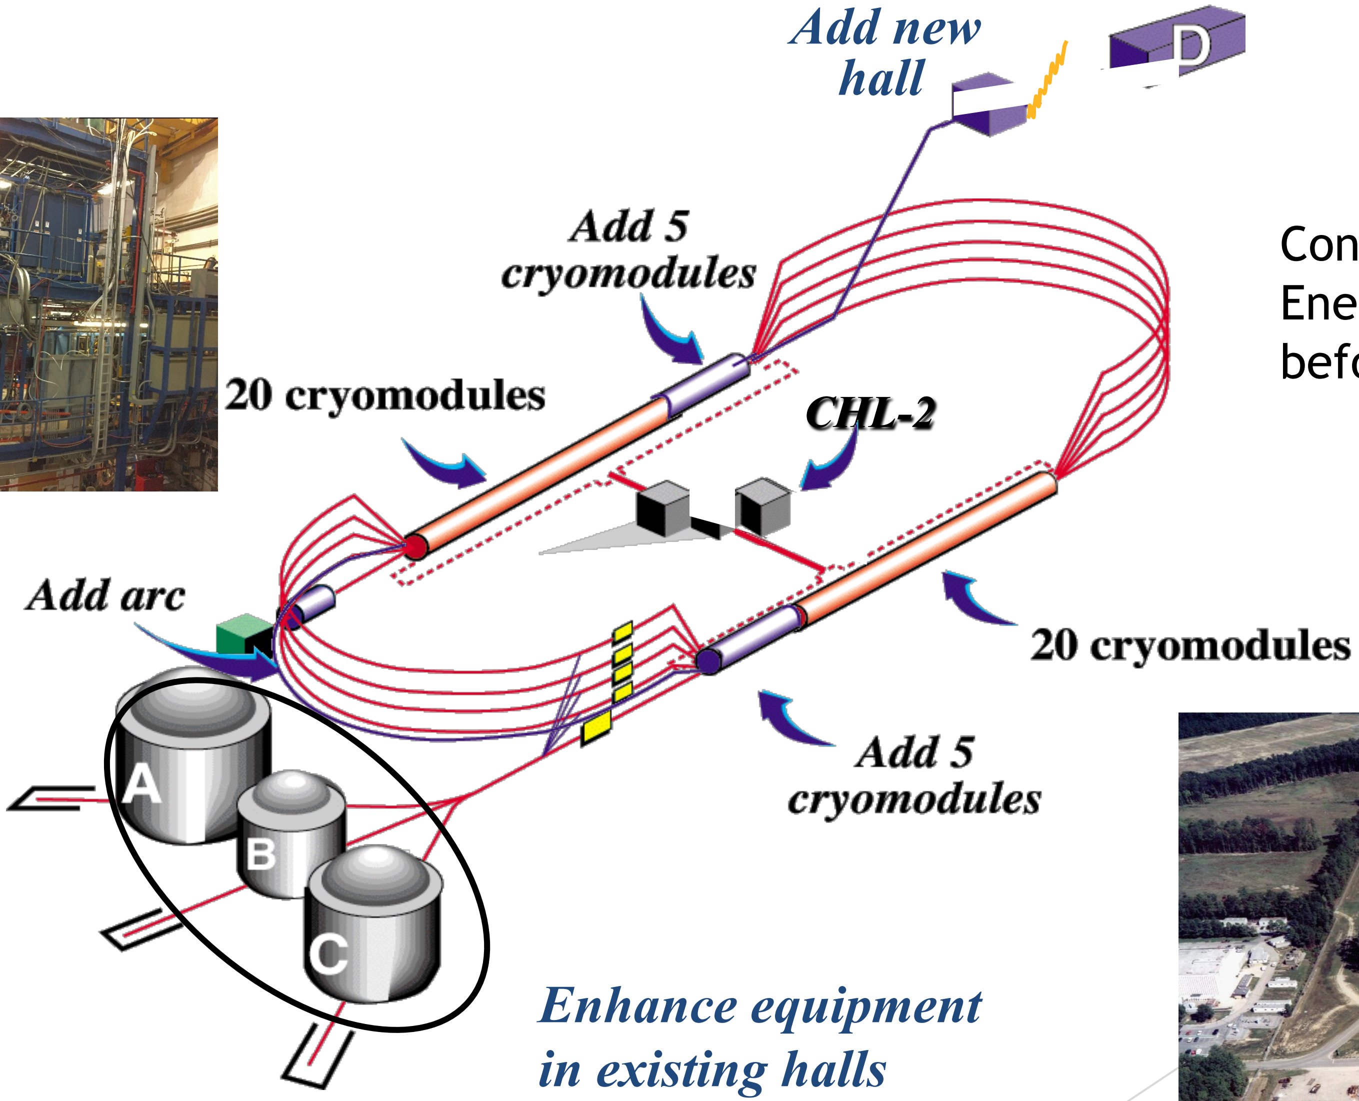
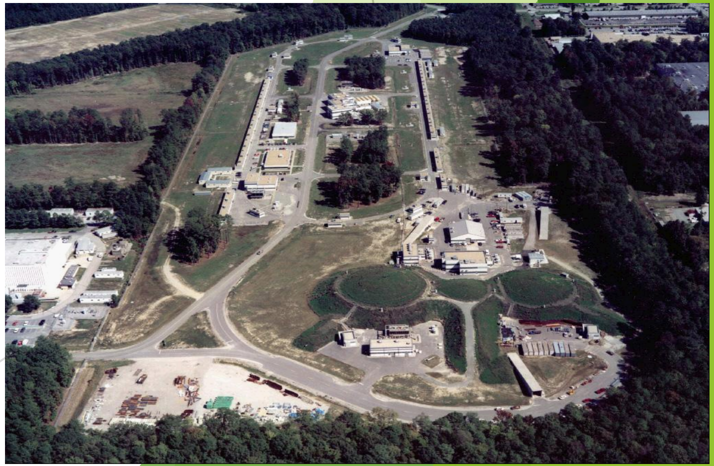
CLAS12 in Hall B



CLAS (1998-2012)



Continuous electron beam with
Energy = 11 GeV
before upgrade: Energy = 6 GeV



N* Spectrum and Structure in Experiments with CLAS/CLAS12

The experimental program on the studies of N* spectrum and structure in exclusive meson photo-/electroproduction with CLAS/CLAS12 seeks to determine:

- N* spectrum with a focus on the new, so-called "missing" and hybrid resonance search
- $\gamma_v pN^*$ electrocouplings at photon virtualities up to 5.0 GeV^2 for most of the excited proton states through analyzing major meson electroproduction channels from CLAS data
- extend accessible Q^2 range up to 12 GeV^2 from the CLAS12 data and explore N* structure evolution in the transition from the strong and pQCD regimes
- explore the hadron mass emergence by mapping out dynamical quark mass in the transition from almost massless pQCD quark to fully dressed constituent quark

A unique source of information on many facets of strong QCD in generating excited nucleon states with different structural features

Review papers:

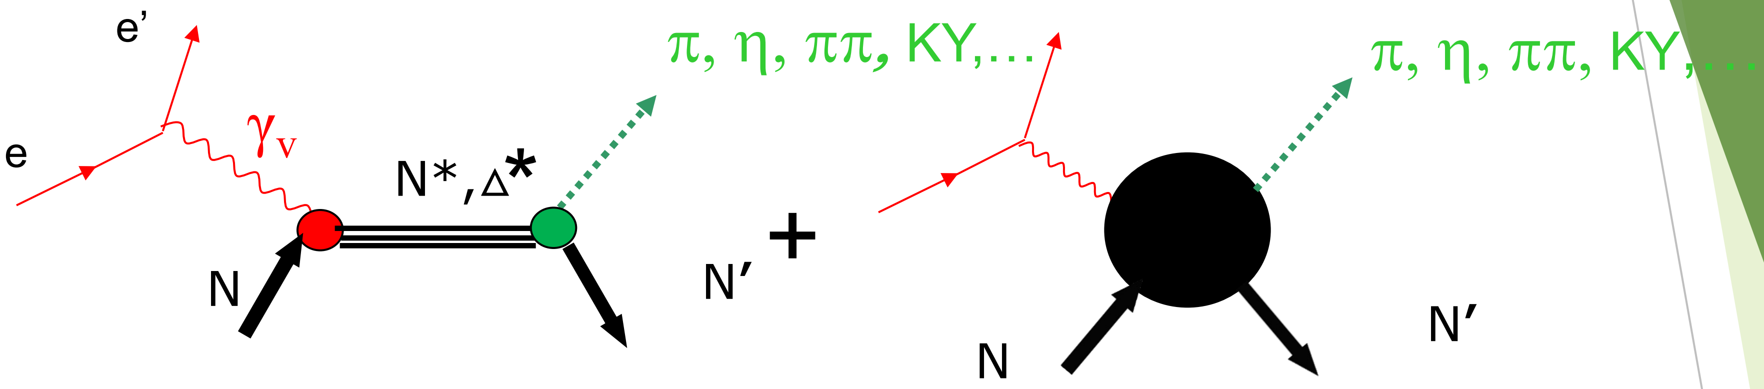
Extraction of $\gamma_v NN^*$ Electrocouplings from Exclusive Meson Electroproduction off Nucleons

Resonant amplitudes **Non-resonant amplitudes**



Definition of N* photo-/electrocouplings employed in the CLAS data analyses:

- **Real $A_{1/2}(Q^2)$, $A_{3/2}(Q^2)$, $S_{1/2}(Q^2)$**

I.G. Aznauryan and V.D. Burkert, Prog. Part. Nucl. Phys. 67, 1 (2012)

$$\Gamma_\gamma = \frac{k^2_{\gamma_{N^*}}}{\pi} \frac{2M_N}{(2J_r+1)M_{N^*}} \left[|A_{1/2}|^2 + |A_{3/2}|^2 \right]$$

- **Consistent results on $\gamma_v pN^*$ electrocouplings from different meson electroproduction channels are critical in order to validate reliable extraction of these quantities.**

Summary of Published CLAS Data on Exclusive Meson Electroproduction off Protons in N* Excitation Region

Hadronic final state	Covered W-range, GeV	Covered Q^2-range, GeV^2	Measured observables
$\pi^+ n$	1.1-1.38 1.1-1.55 1.1-1.7 1.6-2.0	0.16-0.36 0.3-0.6 1.7-4.5 1.8-4.5	$d\sigma/d\Omega$ $d\sigma/d\Omega$ $d\sigma/d\Omega$, A_b $d\sigma/d\Omega$
$\pi^0 p$	1.1-1.38 1.1-1.68 1.1-1.39 1.1-1.8	0.16-0.36 0.4-1.8 3.0-6.0 0.4-1.0	$d\sigma/d\Omega$ $d\sigma/d\Omega$, A_b,A_t,A_{bt} $d\sigma/d\Omega$ $d\sigma/d\Omega$, A_b
ηp	1.5-2.3	0.2-3.1	$d\sigma/d\Omega$
$K^+\Lambda$	thresh-2.6	1.40-3.90 0.70-5.40	$d\sigma/d\Omega$ P^0, P’
$K^+\Sigma^0$	thresh-2.6	1.40-3.90 0.70-5.40	$d\sigma/d\Omega$ P’
$\pi^+\pi^- p$	1.3-1.6 1.4-2.1 1.4-2.0	0.2-0.6 0.5-1.5 2.0-5.0	Nine 1-fold differential cross sections

- $d\sigma/d\Omega$–CM angular distributions
- A_b,A_t,A_{bt}-longitudinal beam, target, and beam-target asymmetries
- P^0, P’ –recoil and transferred polarization of strange baryon

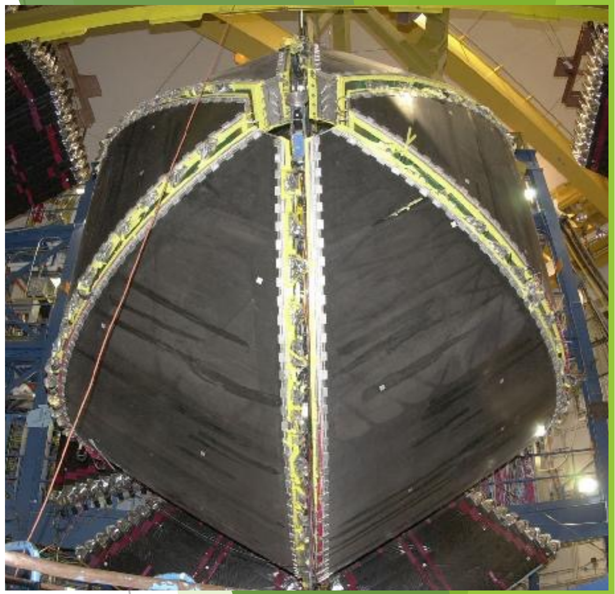
Over 120,000 data points!

Almost full coverage of the final hadron phase space

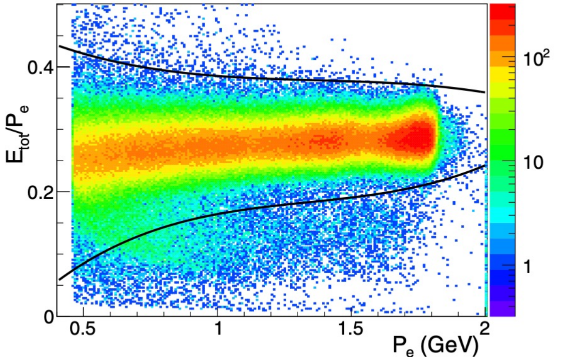
The measured observables from CLAS are stored in the
CLAS Physics Data Base http://clas.sinp.msu.ru/cgi-bin/jlab/db.cgi

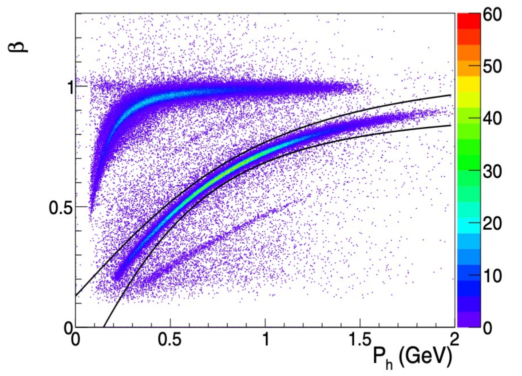
Polarized structure function $\sigma_{LT'}$ from $\pi^0 p$ electroproduction data in the resonance region at $0.4\,\mathrm{GeV}^2 < Q^2 < 1.0\,\mathrm{GeV}^2$

E. L. Isupov *et al.* (CLAS Collaboration)
Phys. Rev. C **105**, L022201 – Published 18 February 2022



- CLAS detector data 12/2002 – 1/2003
- Beam energy: 2.036 GeV
- Beam polarization: ~ 80%
- Target: Liquid Hydrogen, thickness 2 cm
- Number of triggers: ~ 1.5 billion





$0.4 < Q^2 < 1\ \mathrm{GeV}^2$

$1.1 < W < 1.8\ \mathrm{GeV}$

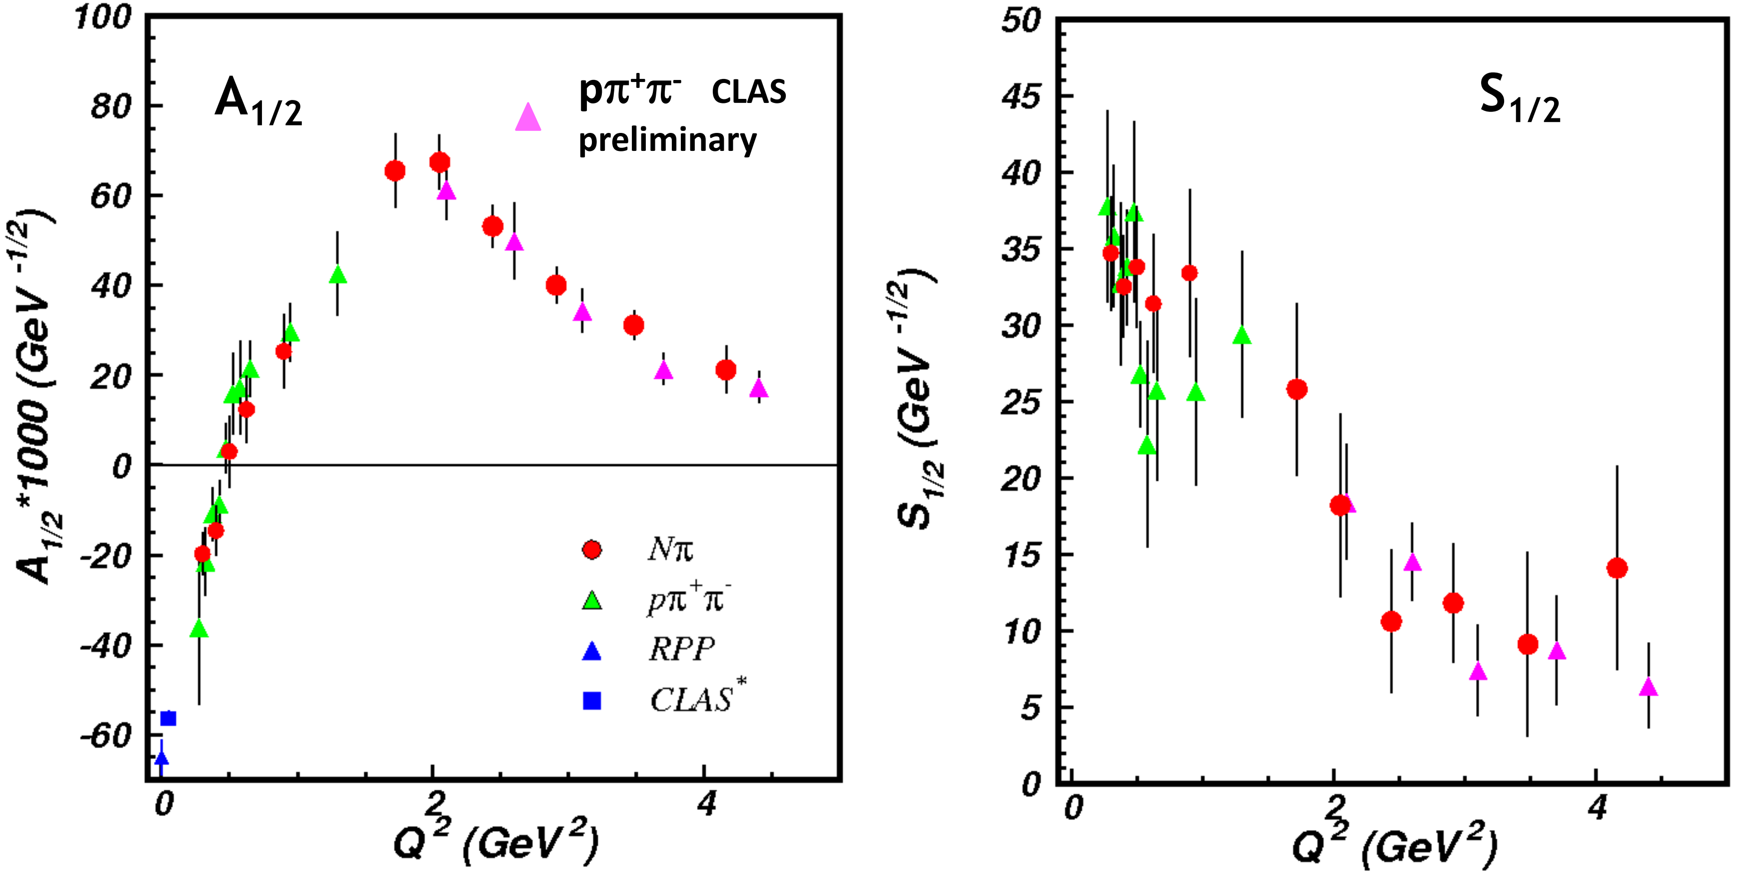
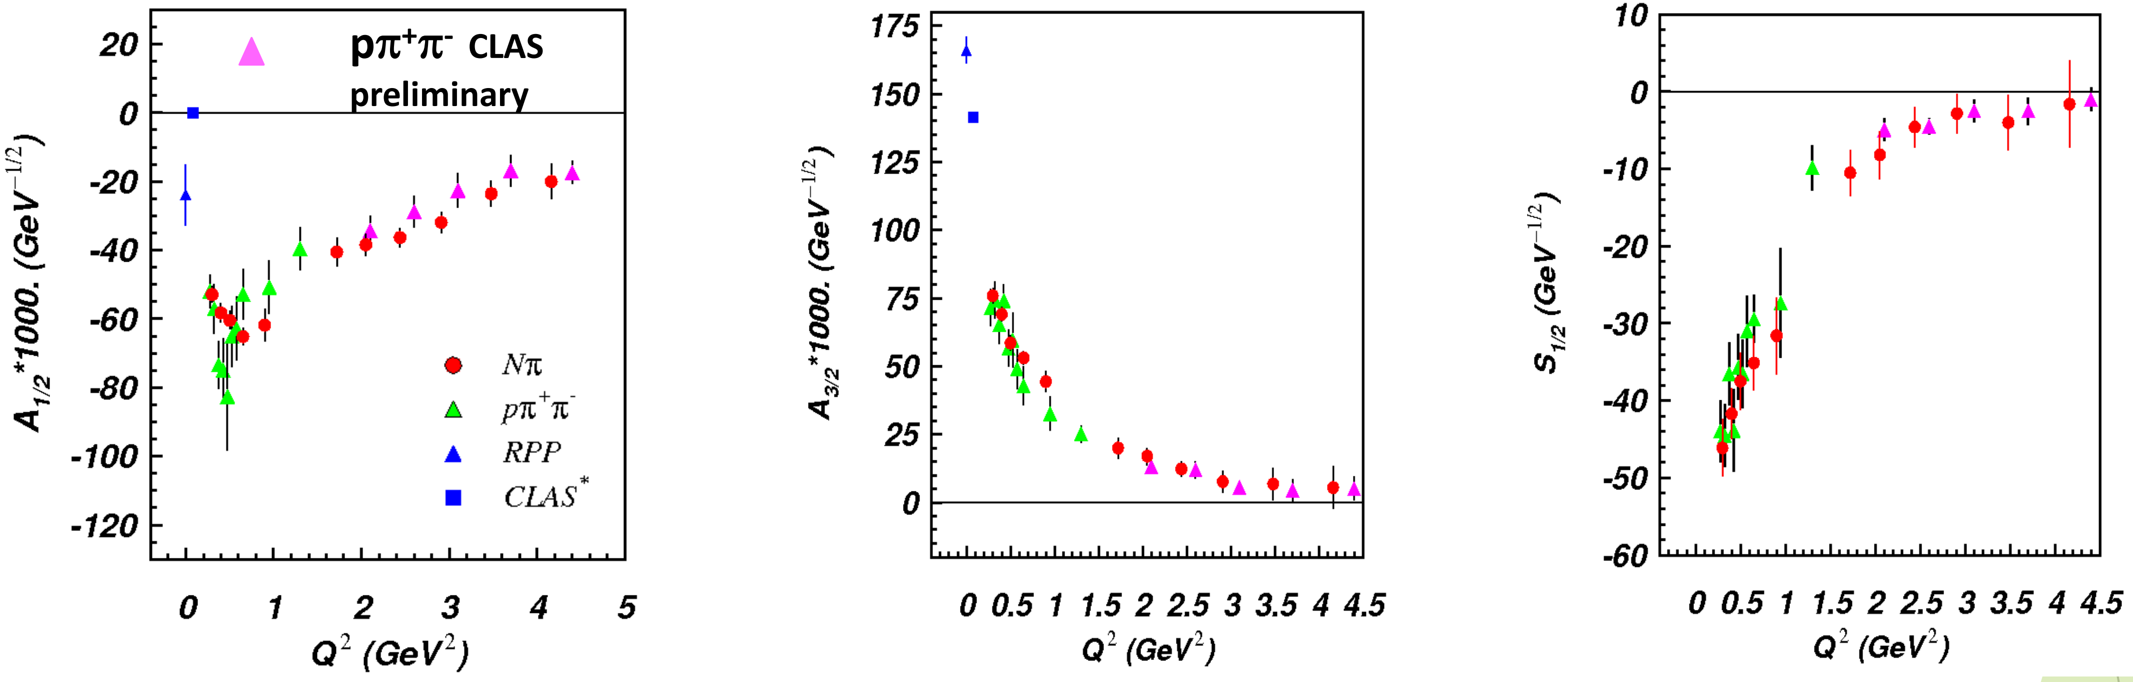
V. D. Burkert, Baryons 2016 and the recent update from the CLAS $\pi^+\pi^-p$ electroproduction off protons data

Electrocouplings of N(1440)1/2+ from Nπ and π+π-p Electroproduction off Proton Data



Consistent results on N(1440)1/2+ electrocouplings from the independent studies of two major Nπ and $\pi^+\pi^-$p electroproduction off proton channels with different non-resonant contributions strongly support credible extraction of these quantities in a nearly model-independent way.

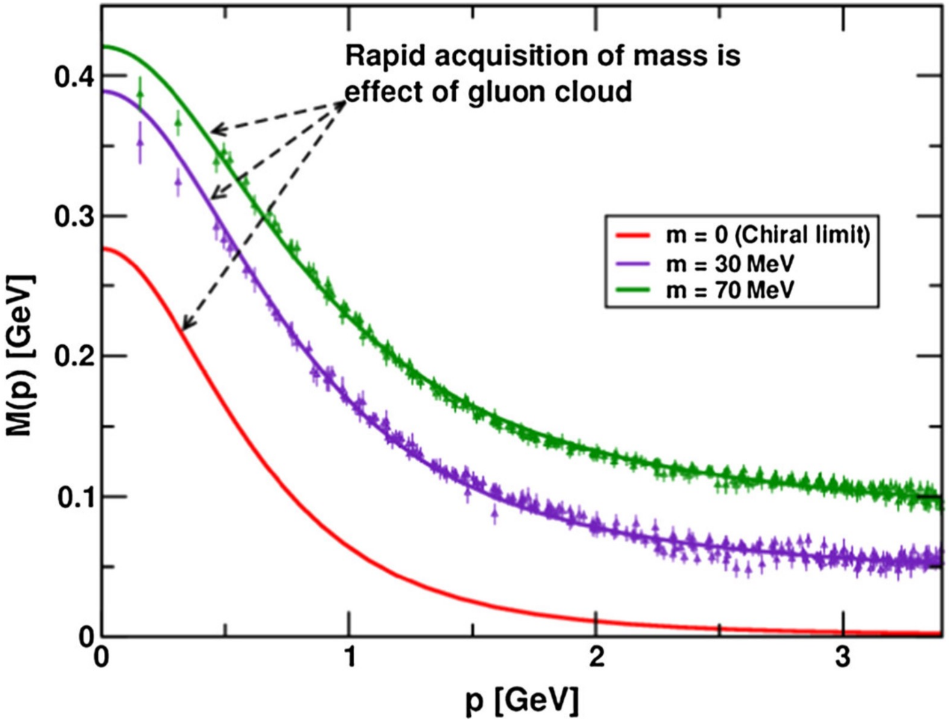
Electrocouplings of N(1520)3/2$^-$ from Nπ and $\pi^+\pi^-$p Electroproduction off Proton Data



Consistent results from Nπ and $\pi^+\pi^-$p electroproduction off proton data on electrocouplings of N(1440)1/2$^+$ and N(1520)3/2$^-$ resonances with the biggest combined contribution into the resonant parts of both channels at W<1.55 GeV strongly support the capabilities of the developed reaction models for credible extraction of resonance electrocouplings from independent analyses of both Nπ and $\pi^+\pi^-$p electroproduction.

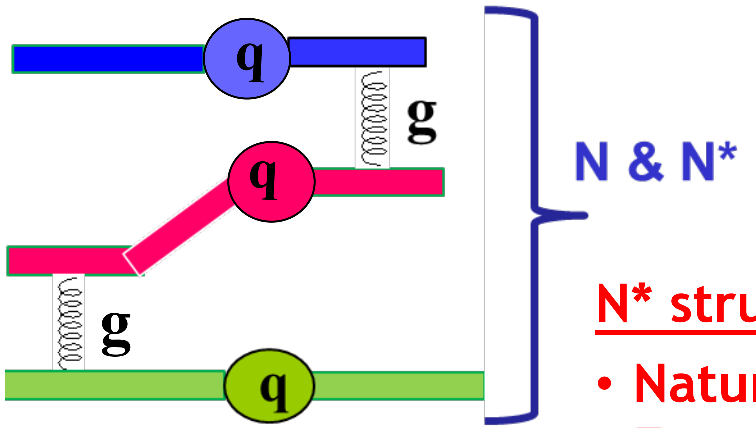
Excited Nucleon States and Insight into Strong QCD Dynamics

Two conceptually different approaches for description of nucleon/N* structure from first QCD principles:
•Lattice QCD (LQCD)
•Dyson-Schwinger Equation of QCD (DSEQCD)



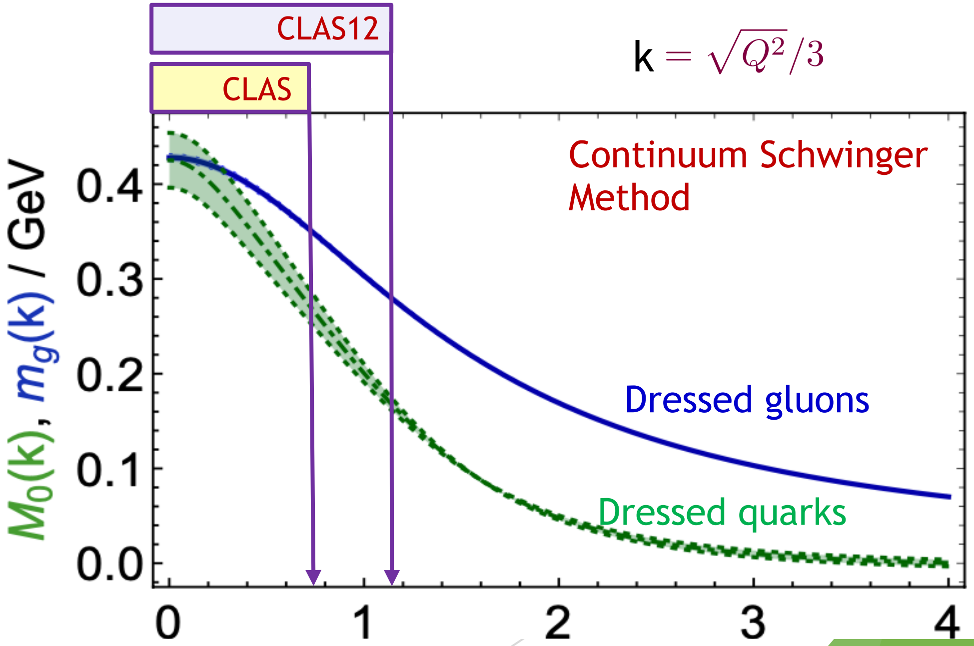
Dressed Quark Mass Function
C.D. Roberts, Few Body Syst. 58, 5 (2017)

quark-quark correlations in baryons
Ch. Chen et al, Phys. Rev. D97, 034016 (2018)



N* structure studies address:

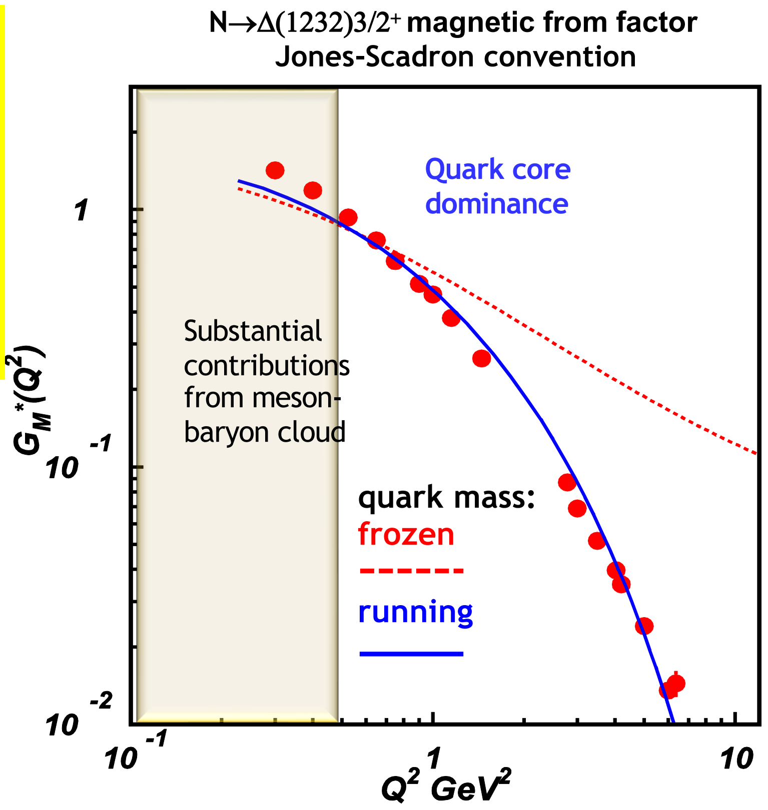
- Nature of > 98% of hadron mass
- Emergence of the ground nucleon parton distributions in 1D and 3D

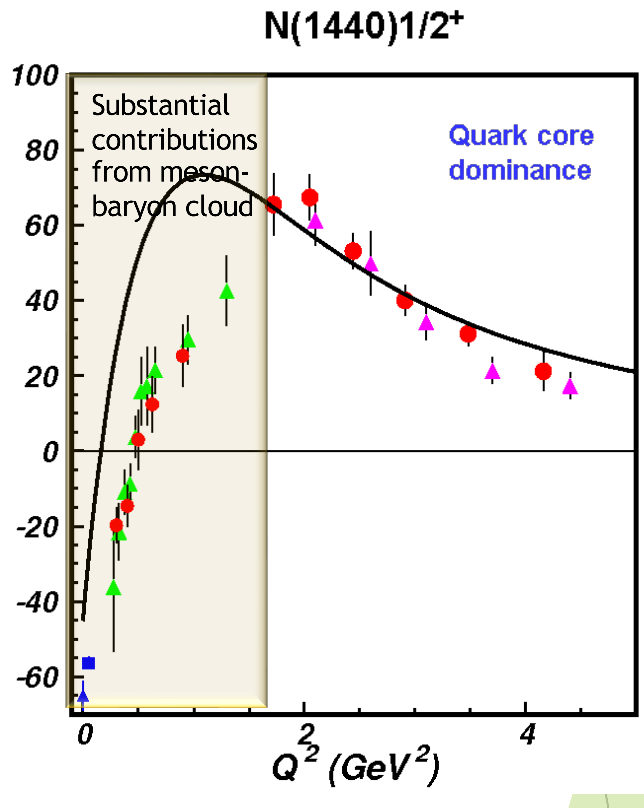


From Resonance Electrocouplings to Hadron Mass Generation

Dyson-Schwinger Equations (DSE):

- J. Segovia et al., Phys .Rev. Lett. 115, 171801 (2015).
- J. Segovia et al., Few Body Syst. 55, 1185 (2014).





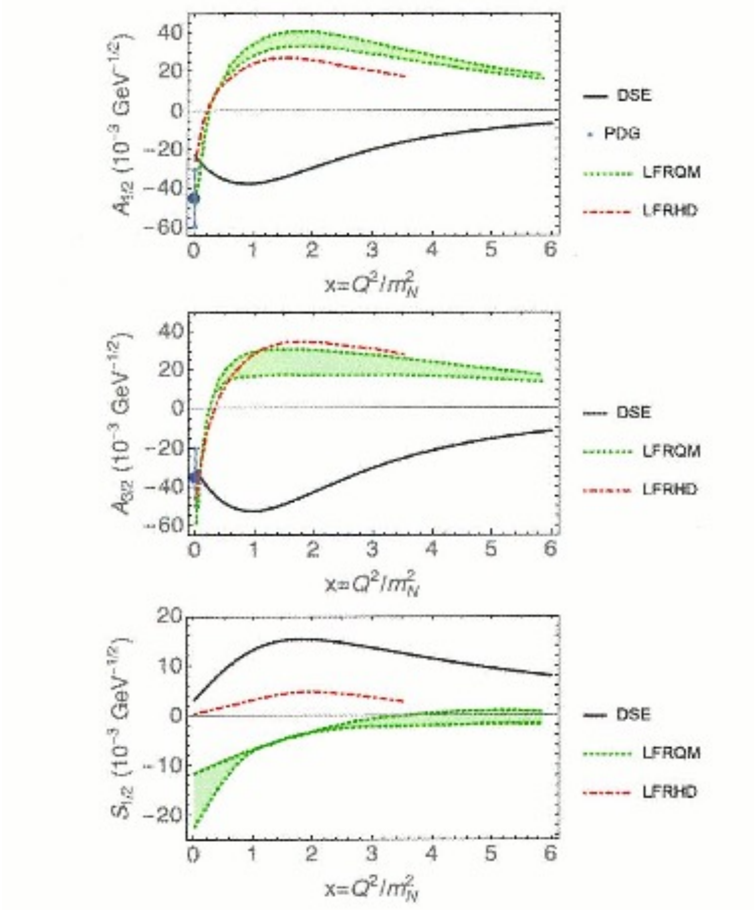
DSE analyses of the CLAS data on Δ(1232)3/2+ electroexcitation demonstrated that dressed quark mass is running with momentum.

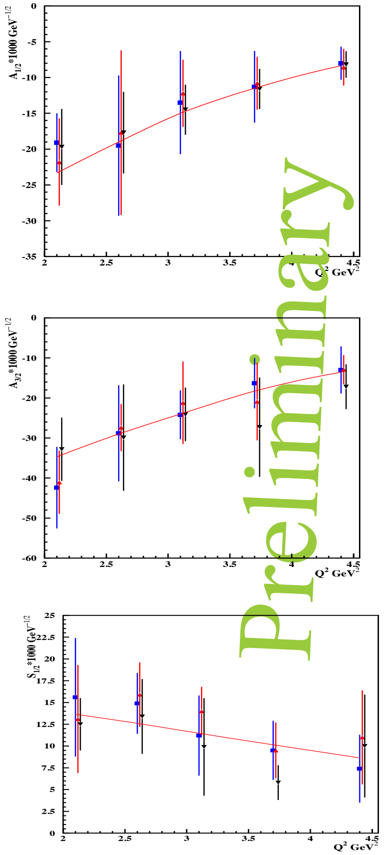
Good data description at Q^2>2.0 GeV^2 achieved with <u>the same dressed quark mass function</u> for the ground and excited nucleon states of distinctively different structure validate the DSE results on momentum dependence of dressed quark mass. $\gamma_v pN^*$ electrocoupling data offer access to the strong QCD dynamics underlying the hadron mass generation.

One of the most important achievements in hadron physics of the last decade in synergistic efforts between experimentalists, phenomenologists and theorists.

Dressed Quark Mass Function from Electrocouplings of Radial Δ-Excitation

Δ(1600)3/2⁺





Victor Mokeev
in preparation

Ya Lu et al., PRD 100, 034001 (2019)

Good description of the CLAS $\pi^+\pi^-p$ electroproduction off protons data was achieved at 1.4 GeV < W < 2.0 GeV and 2.0 GeV^2 < Q^2 < 5.0 GeV^2 within JM19 model.

- **Δ(1600)3/2⁺ electrocouplings are preliminary extracted.**
- **Confirmation of the DSE expectations may prove a relevance of dressed quark with running mass in the structure of Δ(1232)3/2⁺ and radial nucleon and Δ excitations.**
- **Studies of [70,1⁻] orbital excitations is the next step.**

CLAS12 N* Program at High Q^2

E12-09-003

Nucleon Resonance Studies with CLAS12

Gothe, Mokeev, Burkert, Cole, Joo, Stoler

E12-06-108A

KY Electroproduction with CLAS12

Carman, Gothe, Mokeev

- Measure exclusive electroproduction cross sections from an unpolarized proton target with polarized electron beam for Nπ, Nη, Nππ, KY:

  E_b = 11 GeV, Q^2 = 3 → 12 GeV^2, W → 3.0 GeV with nearly complete coverage of the final state phase space

- Key Motivation

  Study the structure of all prominent N states in the mass range up to 2.0 GeV vs. Q^2 up to 12 GeV^2.*

  CLAS12 is the only facility to map-out the N quark with minimal meson-baryon cloud contributions.*

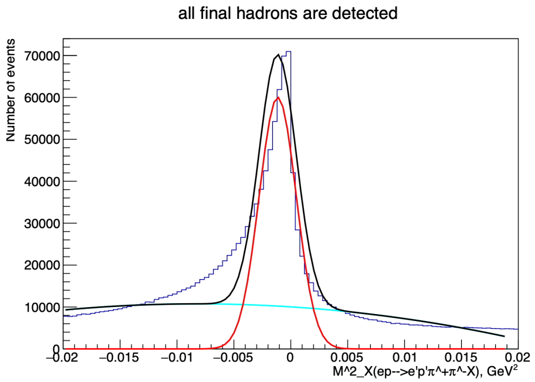
The experiments already started in February 2018!

by Anna Frolova and Alexander Bulgakov

$\pi^+\pi^-p$ CLAS12 data analysis

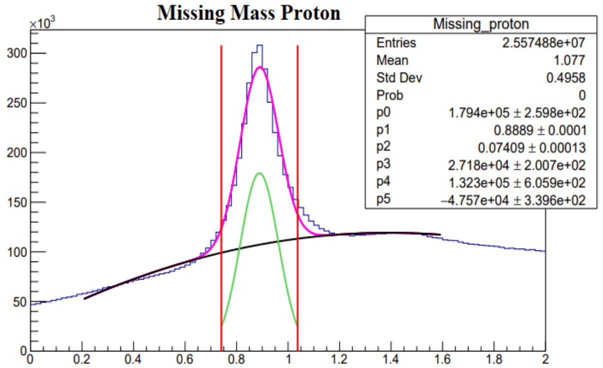
RG-K @ 6.5 GeV

$ep \to ep'\pi^+\pi^-X$



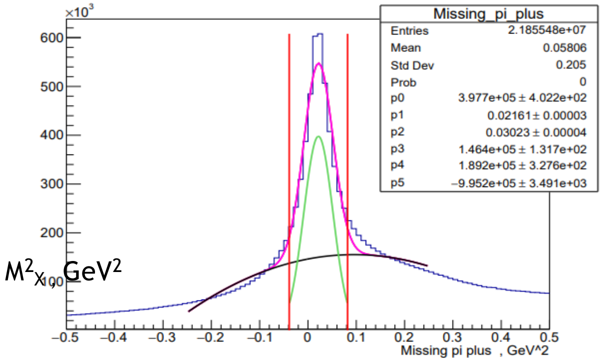
M^2_X, GeV^2

$ep \to e\pi^+\pi^-X$



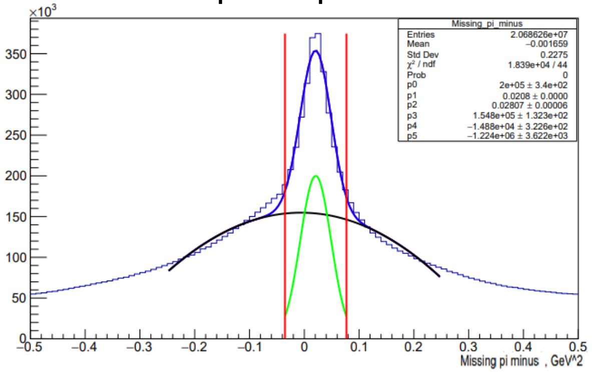
M^2_X, GeV^2

$ep \to e'p'\pi^-X$



M^2_X, GeV^2

$ep \to e'p'\pi^{-+}X$



M^2_X, GeV^2

Available data-set: Data on nine independent one-fold differential cross sections →nucleon resonance electroexcitation

Full statistics for RG-K will allow:

- to obtain $\pi^+\pi^-p$ electroproduction cross section within Q^2-bins of 0.1 GeV^2 size
